

## Chemistry Services for Drug Discovery

Functionalised pyridines are versatile synthons for the preparation of a range of heterocycles including various fused ring systems. Utilisation of the rich variety of our pyridines allows the preparation of fused ring systems with different substitution and regiochemistry. Functional groups can undergo numerous transformations including Nucleophilic Aromatic Substitution reactions and reductions. The halides readily participate in metal catalysed reactions such as the Buchwald - Hartwig, Heck, Suzuki and Sonogashira couplings. Our trisubstituted pyridines are excellent scaffolds as they contain functional groups which can be chemoselectively transformed.

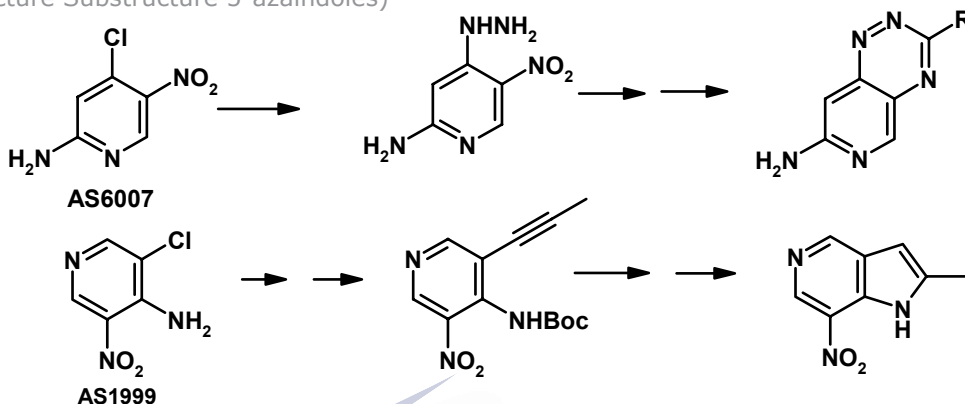

For more examples of pyridopyrazines, accurate availability & pricing please check on: <http://www.activate-scientific.com> (Search Substructure pyridopyrazines)

For more examples of imidazopyridines, accurate availability & pricing please check on: <http://www.activate-scientific.com> (Search Substructure imidazopyridines)

For more examples of 5-azaindoles, accurate availability & pricing please check on: <http://www.activate-scientific.com> (Search Substructure Substructure 5-azaindoles)

For more examples of pyridopyrimidines, accurate availability & pricing please check on: <http://www.activate-scientific.com> (Search Substructure pyridopyrazines)
